

## **Accelerating Continuous Improvement on a Global Scale**

### **ACI Trainee Business Systems Developer (Auditor)**

ACI Global Pty limited is pleased to announce its unique Traineeship the “ACI Trainee Business Systems Developer <sup>TM</sup>”

Mr Erskine CEO of ACI Global says that the Trainee will work within the newly released global industry training system based on the clever alternative to traditional e-learning “e-Quip”.

The ACI Trainee Business Systems Developer <sup>TM</sup> will be provided with the necessary business development tools to fully Develop and Implement a Quality, Environmental, Occupational Health and Safety or an International Food Safety (HACCP) system for any organisation throughout the world to ISO or National Standards.

To assist the trainee business systems developer a highly skilled Business Development Specialist (Lead Auditor) is assigned to oversee the work done by the ACI Trainee Business Systems Developer <sup>TM</sup> ensuring World best Practice at all times.

In launching ACI Global’s Traineeship Mr Erskine makes the point that this is perhaps singly the most important difference between other training programmes and that provided by ACI Global. The ACI Trainee Business Systems Developer <sup>TM</sup> is able to build a very strong bond between themselves and the participating organisation whereby both will benefit by:

- Firstly the trainee will reap the rewards as they will be doing their training on an actual organisation or business not just on case studies. This is vital learning as doing their final two day intensive auditor training they must be able to demonstrate how an audit function works when it adds value to the organisation or the business.
- Secondly the organisation wins as at the end of the trainee’s training they have a practical and cost effective business management system in place that is compliant with and certifiable to international or national standards and certifiable if they choose. This is achieved through the implementation of an effective internal audit programme implemented and overseen by the trainee ACI Business Systems Developer <sup>TM</sup> (auditor) and supported by their assigned Business Systems Developer (Lead Auditor).

To ensure the strictest of confidentiality, a formal commitment as well as a confidentiality agreement is signed between the Student (Trainee ACI Business Systems Developer <sup>TM</sup>

(Auditor)) and the organisation enabling the safeguarding of the participating business or organisations vital Intellectual Property (IP).
